

# Wi-Fire

## hField Technologies Wi-Fire™, Next Generation Released: 27 July 2009

HFWFG200 (FCC, IC, All Non-CE)

HFWFG200-CE (20dBm Maximum)

- ⦿ 802.11 b/g
- ⦿ 27 dBm+ Power
- ⦿ Palm-size
- ⦿ Windows, Mac, Linux
- ⦿ 2.8 oz. (80 grams)
- ⦿ > 1,000 foot (300 m) Range
- ⦿ Ready to use right out of the box

The **Wi-Fire™**, from hField Technologies, is a compact, range-extending USB device that enables you to access a wireless Internet connection from up to 1,000 feet away - three times the range of your internal wireless adapter.

Welcome the Next Generation **Wi-Fire™**, the HFWFG200 is 40% smaller and 30% lighter but still manages to deliver an extra punch over its predecessor, already the most powerful adapter on the market.

The **Wi-Fire™** uses a powerful directional antenna, highly sensitive receiver and proprietary software to enhance normal WiFi signals. With it you can connect wirelessly to the Internet faster and at stronger signal levels than an internal wireless adapter can achieve.

Whether around the house, campus, or on the road, you'll find the **Wi-Fire™** delivers better connectivity and a better Internet experience in tough spots that are just too far away or through too many obstructions.

Get online where you want, when you want, with the **Wi-Fire™**

## Wi-Fire: Faster Speeds
